Cybersecurity Services

Who we are.

DaviSecure
TECHNOLOGIES

Founded in 2025 in Oregon, USA, DaviSecure Tech is an independent cybersecurity consultancy delivering real-world security assessments based on how organisations are targeted today.

We are a team of experienced security professionals who came together to provide practical and effective security engagements. Our consultants have worked across a wide range of industries including technology and software development, healthcare, legal, education, manufacturing, and finance, among others.

Modern attacks no longer require advanced skills. With widely available tools, automation, and AI-assisted techniques, even low-skill attackers can identify and exploit weaknesses. Our assessments reflect this reality by focusing on realistic threats and common attack paths that organisations face every day.

Our team holds industry-recognised certifications and brings hands-on experience assessing complex environments, supporting internal security teams, and delivering security training for both technical and non-technical audiences.

What Businesses Are Facing Today.

DaviSecure
TECHNOLOGIES

Whether you are preparing for your first penetration test, launching a new application, or strengthening existing infrastructure, our team works with you to determine the right security assessments for your environment. You will meet directly with our experts, who listen, advise, and tailor the approach to your risk profile. To maintain quality and focus, we limit engagements to ensure dedicated, senior-level attention on every project.

Some key challenges businesses face in 2025/2026

- Rapidly expanding attack surfaces across cloud, SaaS, and third-party ecosystems
- Limited visibility into complex, hybrid, and distributed environments
- Increasing regulatory and compliance demands across regions and industries
- Security assessments that focus on isolated issues and miss systemic risk

DaviSecure
TECHNOLOGIES

What we help Businesses With.

Visibility

See your real exposure and understand where your systems, people, and data are vulnerable across your environment.

Risk Prioritisation

We help identify which risks pose real business impact, not just technical issues.

Practical Remediation

Clear, actionable guidance to reduce risk without unnecessary complexity.

Security Maturity

Improve over time
Strengthen security processes, awareness, and controls as your organisation grows.

Many organisations lack visibility into their real security exposure until an incident occurs.

Our Core Services

Broad Security Review

Holistic assessment across multiple domains.

Web Application Assessments

Security testing of externally and internally facing Web Applications.

Internal Network and Active Directory Assessments

Review of internal infrastructure, networks, identity, and access controls.

External Attack Surface Assessment

Identification and review of exposed assets and entry points.

Security Awareness Training

Targeted training for technical and non-technical staff.

Note: Services can be delivered individually or as part of a Broad Security Review.

The Broad Security Review (an overview)

The Broad Security Review provides a holistic view of your organisation's security posture across key domains.

It goes beyond a traditional penetration test by reviewing multiple attack surfaces and how an attacker could realistically compromise the business.

The review covers external exposure, internal infrastructure, Active Directory, web applications, and wireless networks.

Physical Security

- Insufficient security of the
 - Reception areas or server rooms
 - Insecure VOIP Phone systems
 - SIP end-points
- Insufficient protection of:
 - Network sockets
 - Servers
 - Enc-user devices
- Inappropriate protection or sensitive information
- Insufficient access controls
- Unprotected & Remotely accessible camera systems
- Weak Door access Control Systems
- Door Tailgating

Vulnerability

- XSS, CSRF, HPP, XXE
- Integer Overflows
- Format String Vulnerabilities
- Dinsecure Session implementations
- Insufficient Access Controls
- Incorrectly Implemented authentication mechanisms
- Information Disclosure
- Insecure Data Storage
- Patching Weaknesses
- Buffer Overflows
- Logic Flaws

- Email Addresses
- Usernames
- Passwords
- Log files
- Back-up files
- Other Sensitive Information Inappropriate disclosure of sensitive information
- Incorrectly configured DNS servers.

- Insufficient network security controls
- Incorrectly/insecurely configured devices & software default configurations
- Vulnerable printer installations
- Insecure desktop infrastructure
- Insecure printers allowing access to restricted resources via VLAN hopping
- Insecure server installations/ weak permissions/insecure software
- Pass-the-hash vulnerabilities/ hash descriptor issues
- Firewall ruleset weaknesses
- Weak VPN implementations
- Insufficient network segmentation
- Insecure unatched software
- Wireless systems

Network Security

Reconnaissance

Our Operational Methods

Assessments are conducted onsite or remotely, based on your environment and requirements.

All activities are clearly defined and agreed in advance.

Testing follows industry-recognised security methodologies, with findings prioritised by real-world risk and business impact.

All testing is performed in a controlled and professional manner to avoid disruption to business operations.

No denial of service or destructive actions are carried out.

Risks are validated and documented with clear, actionable remediation guidance.

Why Choose DaviSecure Tech

DaviSecure
TECHNOLOGIES

Experienced Security Professionals

Our consultants are industry trained and certified, with years of hands-on experience identifying and exploiting high and critical risk security issues. Certifications include CISSP, OSCP, and Security+.

Clear and Practical Communication

We translate technical findings into clear, practical guidance so stakeholders understand the risk and what needs to be done. And critical risk vulns. They are certified with CISSP, OSCP, Security Plus etc

Current and Relevant Threat Insight

Our assessments are informed by real-world attack techniques and threat activity relevant to your industry.

Well written and actionable reporting.

Our reports go beyond technical findings. We clearly explain business impact, risk level, and prioritised remediation steps.

Professional and Trustworthy Approach

We operate responsibly, transparently, and with long-term partnerships in mind.

Free Security Awareness Training Included with every Booking.

DaviSecure
TECHNOLOGIES

Delivery Options

Online or onsite sessions tailored to your environment and team.

Relevant and Practical

Training focuses on realistic threats and everyday risks your staff are likely to encounter.

Reduced Human Risk

Improves awareness and decision-making, helping reduce preventable security incidents.
